“

Automation does not do what testers used to do, unless one ignores most things a tester really does. Automated testing is useful for extending the reach of the testers work, not to replace it.”

1

Automation in Agile

Let's start

Automation in Agile

Automation is a critical component of agile testing. The significance of automating test cases lies in the fact that the count of test cases at the system testing level will keep on increasing after each sprint whenever a new functionality is going to get added and then the old code needs to be regressed to authenticate them.

Due to time constraints, it is important to know what should be automated in best possible way to get good returns from automation.

- **Test automation** is the best way to increase the effectiveness, efficiency and coverage of your software testing.
- Mostly used for **regression** testing.

WHEN YOU HEAR THIS:

- An automated test is able to playback pre-recorded and predefined actions, compare the results to the expected behavior and report the success or failure of these manual tests to a test engineer.

Test Automation Challenges in Agile

Skill Set Team Right Tester Money
Management Tool
Requirement Change Project delivery
Sprint
Backlog System level cases
Technical Knowledge Product feedback
Maintenance Money Time
Integration Planning

Big concept

What to automate?

	Simple things	Hard things
Done once	Do it manually	Automate it
Done often	Automate it	Buy or write software

What to Automate?

- What to Automate ?
 - » Automate the primary functions that will be used by the End-users
 - » Automate End-to-End Scenarios
- What not to Automate ?
 - » Do not try to automate not-so critical portions in the beginning
 - » Do not automate status bars, help screens

When to automate?

When to Automate ?

- Is the Build Stable ?
- Are the Test Cases and Test Scenarios ready and Final?
- Are the Test Data ready ?
- Is the Test Bed ready ?
- Is the Test Automation tool installed ?
- When not to Automate ?
 - If the AUT is not Large\Complex
 - If you receive only few builds to test
 - If the feature doesn't work accurately

How much to automate?

- Ideally 60% Automation is expected for a Regression Suite
 - First, automate the primary functions that will be performed by the targeted end-users
 - Next, add the not-so-critical portions of the application as time permits.
 - Develop a test coverage matrix
- 

Benefits of Test Automation in Agile

ROI

24x7
execution

Unit,
integration,
regression

Re-usability

Reliability

Critical Success Factors

- Test automation must be implemented as a full-time effort, not a sideline.
- The test design process and the test automation framework must be developed as separate entities.
- The test framework must be application independent.

Critical Success Factors

- The test framework must be easy to expand, maintain, and enhance.
- The test strategy/design vocabulary must be framework independent.
- The test strategy/design must hide the complexities of the test framework from testers.

Tools

Technology we use

Selenium WebDriver

POSTMAN

BrowserStack

Microsoft SQL Server Reporting Services

Knockout.js

Microsoft SQL Server Reporting Services

Automation for Mobile apps

Visual Studio Team Foundation Server

git

QA tools

- TFS, Azure DevOps
- VS Enterprise, Microsoft Test Manager
- Microsoft SQL Server Management Studio
- GIT
- Katalon Studio, Selenium, NUnit
- Zeplin, InVision, Maze, Figma
- Snagit, Canva (infografika)
- Postman, Newman
- Swagger, Fiddler
- Responsive Web Design Tester
- BrowserStack
- Jmeter
- OWASP ZAP, Burp Suite
- TeamCity, Jenkins
- Appium, HockeyApp

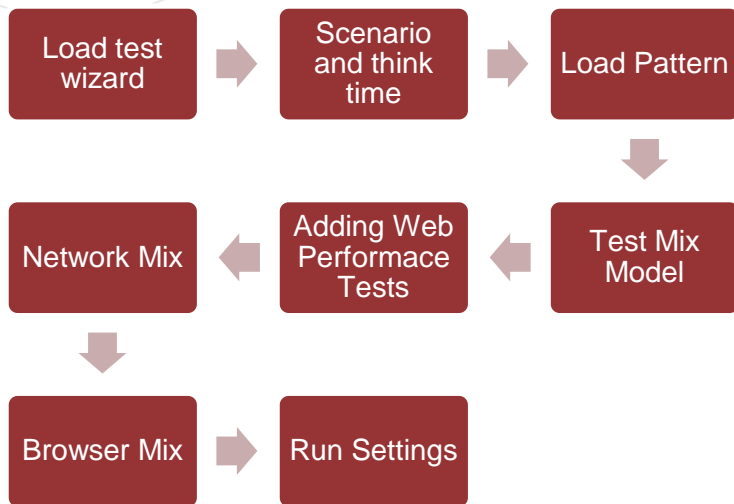

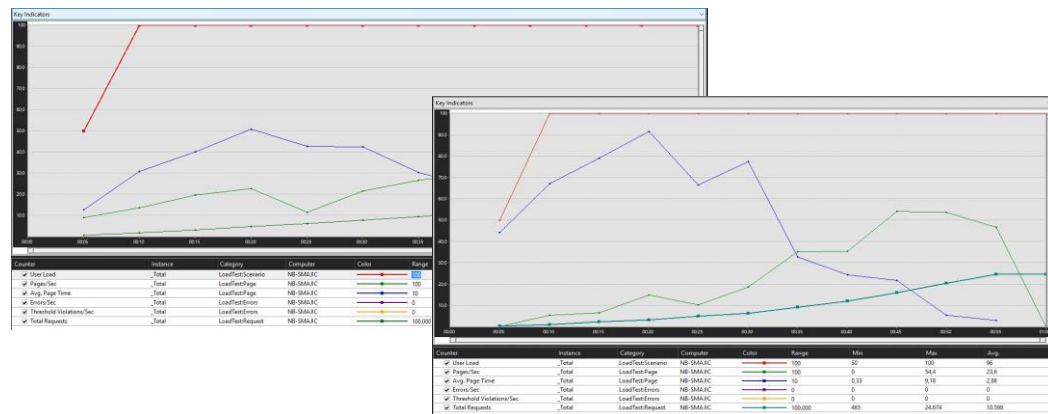

Load and performance testing

Load and performance testing

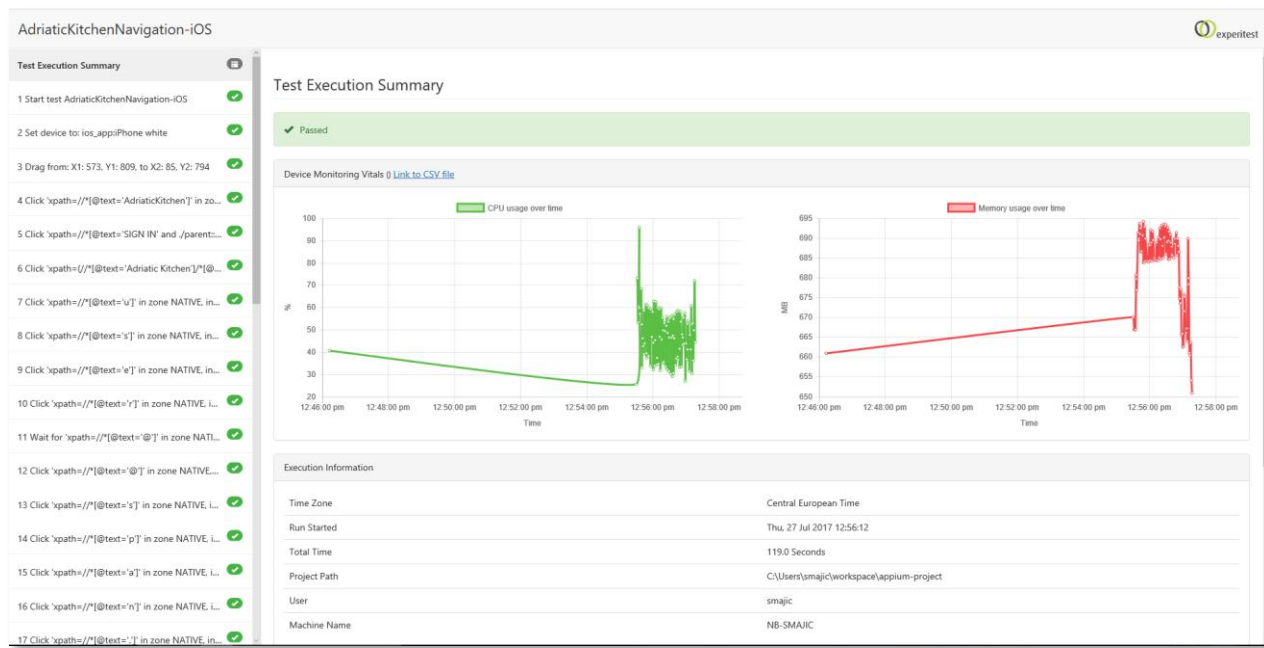

- Visual Studio Enterprise
- Jmeter

Mobile testing

Appium (za MAC & Windows)

- Android & iOS
- Java
- C#(Nunit)
- Python

Device Information (SM-G900F (Stefani))

Let's get our hands dirty

A circular frame containing a desk scene. In the background, a potted plant with green leaves sits in a white pot with a decorative lace-like top. To the right of the plant is a large, black, three-dimensional letter 'A'. Further right is a wooden block with the letter 'S' carved into it. The desk is made of light-colored wood. In the foreground, a smartphone is visible, partially obscured by a white, geometric object. The overall lighting is soft and natural, suggesting a window in the background.

**Zašto više uložiti u API testiranje,
a ne UI?**

HTTP API DESIGN

HTTP request

HTTP response

Koncept

- Core functionalities
- Neovisnost o UI 😊
- Input argument values
- Parameter combinations
- Error Validation
- Scenario testing

- E2E scenario testing

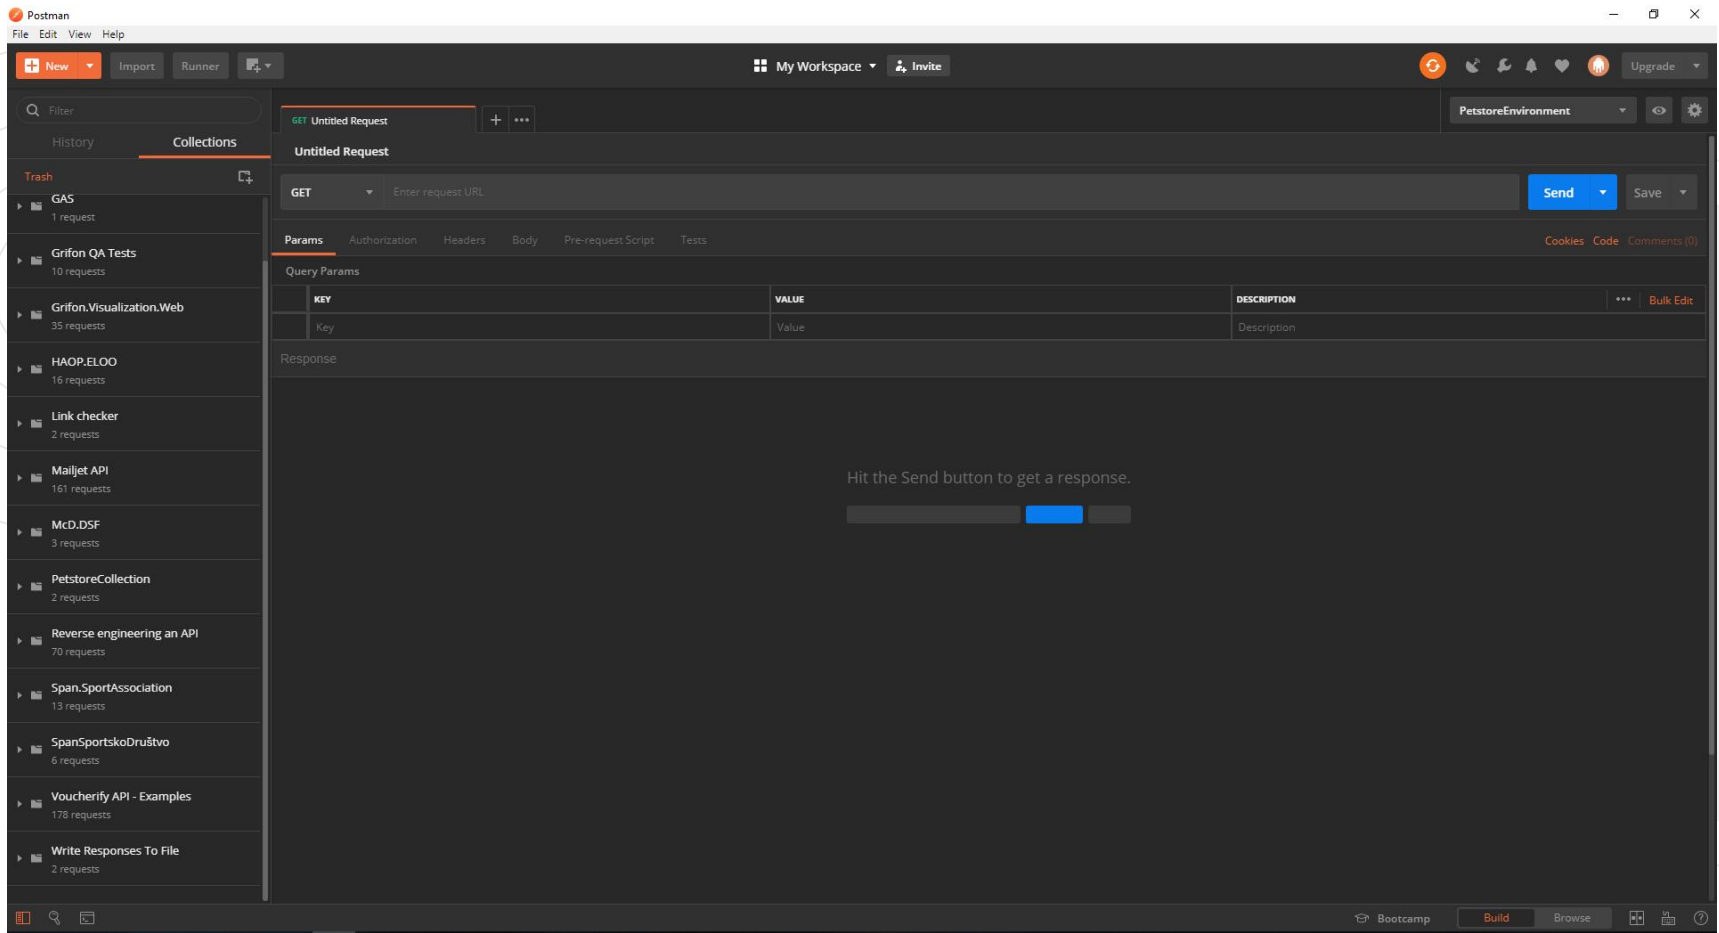

API testing

Postman

- HTTP client za API testiranje

Postman – API testovi

- 3 osnovna koncepta:
 - Collections
 - Environments
 - Skripte (test objects i pre-request)
- Varijable – global, dinamičke i environment
- Mogućnost importa i exporta
- Handleanje autentikacije:
 - Basic/Win auth
 - Digest
 - OAuth 1.0 i OAuth 2.0
 - Hawk
 - AWS Signature
- Korištenje CSV-a
- Collection runner
